DEMYSTIFYING CYBERSECURITY: *Inside A Ransomware Incident*

What does a ransomware attack really look like, beyond the headlines?

The new 4-part video mini-series from **The Cyber Guild**, in partnership with **College Board**, seeks to make cybersecurity tangible, human, and accessible.

This short-form series brings the **NIST Incident Response Lifecycle** to life through a real-world ransomware scenario. Experts across incident response, legal, communications, and recovery show how teams work together under pressure to defend, investigate, and rebuild.

"This is an invaluable resource for AP students, showing that cybersecurity is foundational and that there are multiple pathways into the field. It helps students see themselves shaping our digital future." **Diana Rothschild, Vice President, Strategic Reach & Workforce Partnerships, College Board**

Co-Executive producer, **Edith Santos, Head of Information Security and Governance, Ericsson** shared the motivation behind the series: "In a fast-changing digital world, we are all lifelong learners. We wanted to go beyond theory and show the real decisions, tensions, and teamwork that define cybersecurity today, to make the invisible visible."

"Storytelling is powerful. My goal was to make each moment feel real, so viewers understand the stakes, the impact, and where they might fit in." **Katea Murray, Vice President, Chief Technology Officer, Mission Solutions, Leidos**

If you're an educator, workforce leader, or exploring the future of cyber—this is one to watch.
